your career

LEVEL UP YOUR SKILLS

Scenario 1: Monthly Sales Report Automation

The Problem: Data analysts spend hours every month filtering, cleaning, and summarising data for management.

The Fix: One FILTER + SORT formula that builds the report in seconds.

Formula:

```
=FILTER(SORT(SalesData!A:F, 3, -1), SalesData!C:C=G2)
```

Shortcut: Ctrl + T → Turn data into a table for dynamic ranges.

Scenario 2: Daily KPI Dashboard Cards

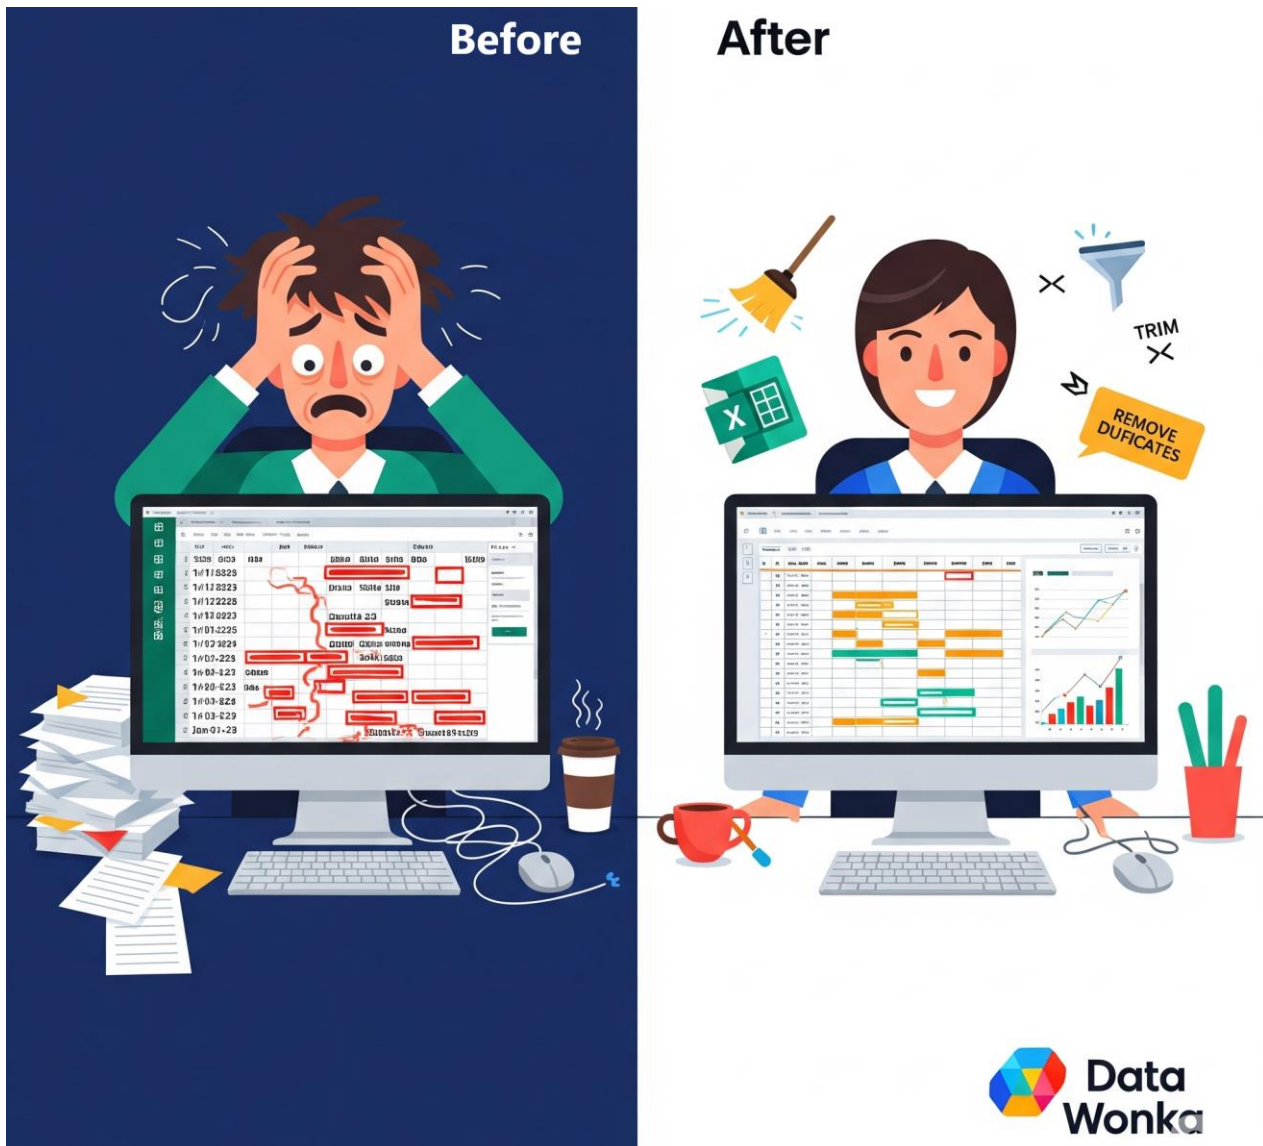

The Problem: Management wants KPIs in a pretty format without opening raw data sheets.

The Fix: Dynamic dashboard cards with TEXT, SUMIFS, and conditional formatting.

Formula Example:

```
= "Total Sales: ■" & TEXT(SUMIFS(SalesData!D:D, SalesData!A:A, TODAY()), "#,##0")
```

Shortcut: Alt + H + L + S → Add data bars instantly.

Scenario 3: Auto-Sending Reports via Email

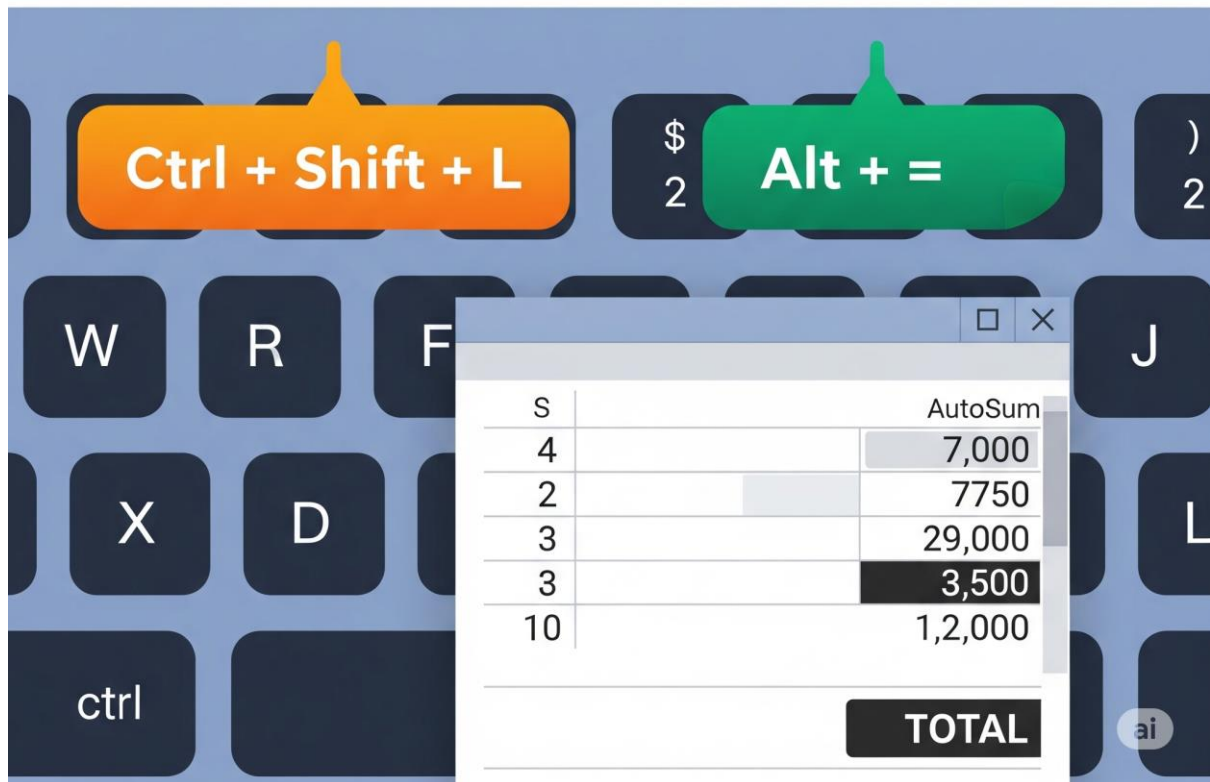

The Problem: Sending the same report to multiple stakeholders is boring and slow.

The Fix: VBA macro to email reports directly from Excel.

Code Snippet:

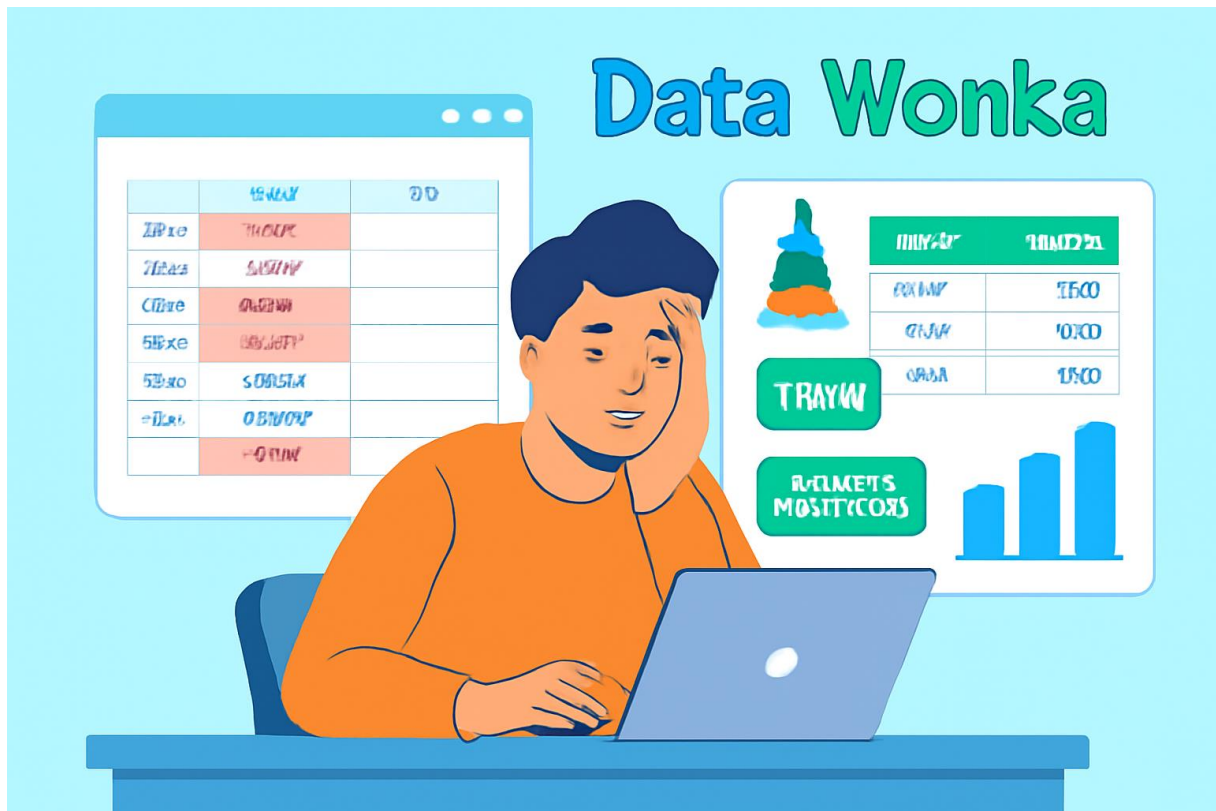

```
Sub SendReport()
    Dim OutApp As Object, OutMail As Object
    Set OutApp = CreateObject("Outlook.Application")
    Set OutMail = OutApp.CreateItem(0)
    With OutMail
        .To = "manager@company.com"
        .Subject = "Daily KPI Report"
        .Body = "Hi, please find today's report attached."
        .Attachments.Add "C:\Reports\DailyReport.xlsx"
        .Send
    End With
End Sub
```

Shortcut: Alt + F11 → Open VBA editor instantly.

Quick Wins + Excel Shortcuts

Ctrl + Shift + L	Toggle filters
Alt + =	AutoSum instantly
Ctrl + Space / Shift + Space	Select column/row
Ctrl + ;	Insert today's date
Ctrl + Shift + !	Number format
F4	Repeat last action
Ctrl + 1	Format cell dialog
Alt + Down Arrow	Drop-down in cell
Ctrl + Shift + \$	Currency format
Ctrl + Shift + ~	General format
